

# Installing Médiacours Teacher

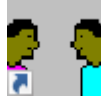

## User's guide

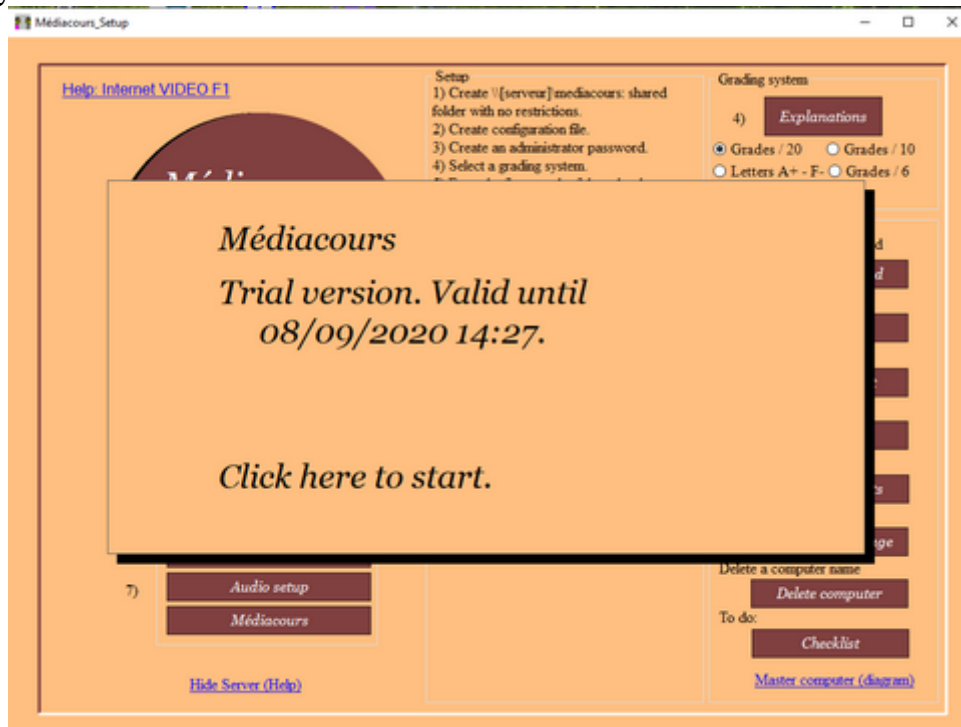

Before configuring Médiacours for the first time, a shared folder must be created on the server. (French version of Windows 10® shown.)

All users must have permission to read, write, and delete files in this folder. [Video](#)  
This process is the same for SSM but uses a different folder for each program.

Click on the gray desktop icon  to run Médiacours Teacher Setup. Before a license key has been installed the interface looks like this.

There is a list of tasks that must be done to install Médiacours Teacher.

- 1) Create \\[server]mediacours: shared folder with unlimited access.
- 2) Create a setup file
- 3) Create an administrator password.
- 4) Select a grading/marking system.
- 5) Enter the start of the school year.
- 6) (Optional) Add school subjects.

This [video](#) shows these steps. Click on  if necessary.

The administrator can create the subject list with this interface or teachers can do it with the teacher interface.

- 7) Set up the audio system. [Here](#) is another video which shows how to do that. It's the only part of the setup which is relatively complex.
- 8) set up all the student computers: run Médiacours\_Student\_Setup on each

computer. Icon:  [Video](#)

9) Run Médiacours\_Teacher\_Setup on othe computers if you are going to use Médiacours in more than one classroom.

10) Run Médiacours\_Teacher installed on each master computer. Right-click on the top right of the Médiacours reception page to access the web page and create the list

of student computers linked to the master computer. Icon:  [Video](#)

This [video](#) how to convert the trial version to a licensed version when a key has been

obtained.
